Education

B.E. in Electronics and Telecommunication

M S Ramaiah Institute of Technology

2022 to 2026

Bangalore, India

Technical Skills

Languages: Python, TypeScript, Node.js, Rust, C++, SQL, Go

AI/ML: PyTorch, HuggingFace Transformers, LangChain, scikit-learn, RAG, LLMs, NLP, Vector Embeddings

Frameworks: FastAPI, Express, Flask, gRPC

Databases: PostgreSQL, MongoDB, Redis, pgvector, Pinecone

Infra & Tools: Docker, AWS, Kafka, Kubernetes, CI/CD, WebSockets, GraphQL, Prisma, Prometheus

Hands-On

- Built a **load balancer** in **Rust** with round-robin and weighted scheduling, health checks, and zero-downtime failover.
- Implemented sliding-window and token-bucket **rate limiter** in Node.js for scalable, abuse-resistant API protection.
- Created a **Redis clone** in Rust supporting pub/sub, TTL persistence, and atomic concurrent operations.
- Developed a real-time chat system with Docker and Redis Pub/Sub sustaining 500+ concurrent WebSocket connections.
- Engineered a **VoiceKit library** in Python with real-time **sentiment analysis**, **intent classification**, and **acoustic feature extraction** using MFCC pipelines and spectral analysis.
- Implemented a **multi-layer neural network from scratch** in Python with forward/backward propagation, custom activation functions, cross-entropy loss, and gradient descent optimizer; achieved 94% accuracy on MNIST classification.

Achievements

- 3rd Place** — "I Love Hackathon" Web3 Track, Bangalore (500+ participants)
- Top 10 Finalist** — INDUSTRIAI Hackathon, IIT Madras
- Open Source Contributor** — 5+ repos with 100+ stars

Experience

Skippyed — Software Engineer Intern (Remote)

January 2026 to Present | Dubai, UAE (Remote)

- Architected and deployed the end-to-end **course platform** on **AWS**, owning backend design, API contracts, and cloud infra; scaled to 500+ concurrent learners at launch with high availability.
- Refactored distributed ML API into a streamlined **monolith**, cutting deployment cycles by **60%** and enabling faster model iteration.
- Implemented **AWS EventBridge**-driven asynchronous notification system, achieving **99.9%** delivery reliability and reducing missed alerts by **85%**.

Induslila Games — Full Stack Developer (Remote)

October 2025 to January 2026

- Founding engineer on **UniMarket** prediction platform; designed core trading engine and real-time data pipelines supporting 1,000+ active traders.
- Optimized **PostgreSQL** query execution plans and **Redis** caching layer, achieving **45%** faster API response times and 3× throughput capacity.
- Built an **LLM-powered inference engine** for confidence scoring and personalized recommendations, increasing user engagement by **30%**.

Projects

Bot-Daddy — AI Chatbot Platform for Businesses

github.com/devxspectre/bot-daddy

Built a production **SaaS platform** with a full **RAG pipeline**, **LLM orchestration**, and **semantic vector search** using **Cohere AI embeddings**, **pgvector**, and **PostgreSQL**. Handles 1,000+ queries/day via **REST APIs**, **JWT auth**, and **Docker**-deployed cloud infra with **CI/CD**.

Payzee — Crypto Payment Gateway SaaS

github.com/devxspectre/payzee

Architected a fault-tolerant **event-driven backend** in **Node.js** using **microservices**, **Kafka** message queues, and **Redis**, processing 10K+ transactions/day at **99.9% uptime**. Implemented async job processing, **distributed tracing**, API rate limiting, and observability via **Prometheus**.

Metaverse-2D — Multiplayer Virtual Space Platform

github.com/devxspectre/metaverse-2d

Designed a **distributed real-time backend** in a **turborepo** monorepo using **Node.js**, **WebSocket protocol**, and **Redis Pub/Sub**, sustaining 500+ concurrent players with **PostgreSQL** persistence and intelligent **Redis caching**. Modular microservices architecture designed for horizontal scalability.
